## **DETAILED ACTION**

### ***Claim Objections***

Claims 5-21 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, claims 5-21 have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Harvill'402.

The Harvill reference discloses a glass bottle testing apparatus and method that includes pressurizing a bottle from atmospheric pressure up to a maximum equivalent pressure of approximately 225 (see Fig. 4A) in a combination of both ramped and stepped fashion (i.e. see the linear representation of the increase in pressure) over a period of time greater than 16 seconds followed by a rapid decrease (i.e. essentially instantaneously) in pressure back to atmospheric conditions over a far less period of time represented by  $T_5$  (see Fig. 4A).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Richter et al. and Jackson et al. references pertain to other bottle testing arrangements.
